PREMIUM ROCK BREAKER GREASE

An aluminium complex grease, designed specifically for lubricating hydraulic hammers in the earthmoving and demolition industries. With almost 21% lubricating solids, this grease is unparalleled for extreme pressure and extreme temperature applications.

Screw in cartridges suit a number of Hammers including Indeco, Montabert, Soosan

- Excellent oxidation stability provides lasting lubrication at high temperatures.
- Excellent extreme pressure (EP) and anti-wear performance to minimise wear.
- 21% moly/graphite & copper solids.

LUBEX ULTRA BLACK TAC

Specially developed lithium complex grease containing high levels of lubricating solids, extreme pressure additives and a very high base oil viscosity. The grease has shown exceptional performance providing extended lubrication intervals over a wide operating temperature range.

It has an extreme load capability making this grease ideal for heavy duty applications in the mining and earthmoving industry which includes excavators, hammers & rock breakers and other high impact surfaces experiencing high shock loading.

- Excellent extreme pressure and anti-wear performance to minimise wear.
- Good corrosion resistance and protection of yellow metal components.
- 5% Moly (molybdenum disulphide).
- Resists breakdown when washed.
